

Cool Water Cycle Song by Mr. Davies (teachertube.com)

Water from a little puddle turns to gas...Evaporation
The gas forms into puffy clouds....Condensation
The clouds get heavy and the rain pours down.....Precipitation
and more puddles on the ground

The water cycle...round and round
Vapor goes up and the rain comes down.
Water in the in the sky, in the ocean, in the ground.
It's all in a cycle going round and round.

Some clouds look like a horse's tail...that's cirrus
Some clouds look like cauliflower...that's cumulus
Some clouds look like a blanket of gray...that's stratus.
There are high clouds, low clouds, and in-between clouds.
Fog on the ground is also where we've seen clouds. Yeah, yeah, yeah.

The water cycle...round and round
Vapor goes up and the rain comes down.
Water in a river, in a glass, in a cloud.
It's all in a cycle going round and round.

When warm air meets cold air, trouble brews.
That could mean a storm and that's bad news.
A hurricane can form when that happens near warm water.
Look out if that storm reaches land.
Get out of the way, grab your sons and daughter.
Crash, bash, boom, and kabam.
Oh no, we forgot Uncle ...Dan
I'm okay, I'm alright, I was just hiding in a garbage can.
He was hiding in a garbage can.

The water cycle...round and round
Vapor goes up and the rain comes down.
Water in a person, in a well deep down.
It's all in a cycle going round and round
